PRESS RELEASE

Pelco by Schneider Electric Showcases Security Management Solutions at 2016 ASIS Seminar

Clovis, Calif. – August 29, 2016 – [Pelco by Schneider Electric](#), a leading provider of intelligent video surveillance and security management platforms, will highlight its full suite of advanced solutions designed to solve the safety and business challenges of today's enterprise organizations during next month's [ASIS International Seminar and Exhibits](#), being held Sept. 12-15, in Orlando, Fla., at Booth #2300.

Trusted by a wide variety of airports, seaports, critical infrastructure sites, casinos and cities across the globe, Pelco technologies assist users in achieving more robust security levels through multi-departmental and agency cooperation. The company's [Sarix™ Enhanced Next Generation Camera Range](#) delivers the best possible images in difficult lighting conditions such as a combination of bright areas, shaded areas and intense light, while the new [ExSite Explosion-Proof Camera](#) enables the capture of high-quality video in a variety of challenging and volatile environments, such as oil and gas production sites, marine applications, and hazardous materials plants, to allow more informed, efficient incident response. These powerful video cameras can also be a powerful tool to monitor operational issues in remote locations.

Advanced security management platforms, such as [VideoXpert™](#), helps users identify the most relevant security data to elevate the effectiveness of video monitoring and reporting. When combined, Pelco solutions streamline usability and let operators focus on the most critical incoming information to efficiently and proactively address a wide variety of security situations.

"As a growing airport, we constantly examine the solutions we have in place and look at ways to improve how we conduct investigations, provide operators with a greater amount of situational awareness and streamline business operations," said Joe Maskovich, City of Fresno Airports Chief of Public Safety. "Our systems are a work in progress, and we're glad to have a partner like Pelco that will help us be successful."

At ASIS, Pelco will also discuss its focus on delivering technologies based on open standards and to easily integrate with other surveillance devices, analytics, and various third-party tools that contribute to a cohesive security posture. Open platforms are critical to today's modern organizations and have the

ability to support other systems outside of security (i.e. radar systems, IT network access and building management), which ensures technology investments will continue to be highly valuable in the future.

“Pelco solutions enable more intelligent and informed decisions for enterprises across the globe,” said Sharad Shekhar, CEO, Pelco. “Our team is focused on helping end customers mitigate risk, ensure robust security and safety levels are maximized and propel collaboration that drives new value across organizations.”

New Technology Offerings

Pelco technical leaders will provide interactive demonstrations of its full suite of solutions, including [VideoXpert™ Video Management System \(VMS\)](#), the [Sarix™ Enhanced Next Generation Camera Range](#), [Optera™ Panoramic Cameras](#) and a preview of the [ExSite Explosion-Proof Camera Line](#).

VideoXpert continues to offer end users the power to gather and analyze critical security, video and operational data for quick decision-making in the event of an emergency. The open platform offers users the flexibility to integrate with third-party systems, or seamlessly add Pelco technology, such as the Optera Panoramic cameras to achieve new levels of situational awareness or the Sarix Enhanced Next Generation Camera Range to experience high-quality images in low-light conditions.

Available in early 2017, the ExSite Explosion-Proof Camera Line will be previewed to allow end users in the petrochemical, marine, port, and hazardous materials environments the ability to view its advanced IR illumination, high-quality images and see for themselves its tough form factor in person.

Pelco will be available to discuss vertical market applications and specific technology features throughout the ASIS Seminar. To schedule a meeting with the Pelco team, contact Sandra.Lamonica@schneider-electric.com.
